UNLEASH POTENTIAL

# QlikView to QlikSense Migration

Many businesses are turning to QlikSense in order to empower their employees with self–service data discovery. The migration from QlikView to QlikSense is simple yet there are a few factors to keep in mind.

## Architecture

The architecture dictates that QlikView and QlikSense cannot be on the same server, if organisations want to keep both programmes it would be necessary to utilise a secondary-server.

## Cost

The cost of the migration varies on the number of licences purchased. If over 5 licences are purchased a server will be included free of charge. The license structure differs across the two technologies ; 1 QlikView Named CAL is the equivalent to 1 QlikSense token, 3 Document CAL's = 1 QlikSense token.

## Migration process

The migration process consists of two stages, the first is the back-end migration, the second is the development of the front-end. When transferring to QlikSense the back-end will remain intact however, it is necessary for the front-end to be redeveloped. Decision Inc.'s consultants are highly skilled in both phases of the migration process.

## Quality assurance and training

Decision Inc.'s service offering ensures a high level of quality assurance throughout the migration process. Thereafter ample training and education is carried out in order provide our clients with the necessary knowledge in order to utilise QlikSense to it's full potential.

# Key Benefits

**Mobility :** Responsive design which adapts information based on screen size

**Intuitive:** Seamless navigation across multiple dashboards and data sources

**Customisation:** Ability to build apps in accordance with unique business needs

**Self service BI :** Drag and drop capabilities, intuitive interface and responsive design
